

Silencers

"A perfect match for both my acoustical and air flow performance requirements."

Silence is Golden

Noise produced by an HVAC system can lead to complaints from building owners & occupants. Eliminate the complaints by including duct, plenum and fan silencers on your next project design.

Engineered to fit your application, our silencers are designed to reduce noise in specific octave bands or across a wide range of noise levels. Available in round, rectangular, elbow, or return grille designs, they are the perfect solution for all of your noise pollution issues.

For your sensitive applications like hospitals, electronics, pharmaceuticals and clean rooms that require contaminate free environments, our full line of Media Free Silencers will enable you to design systems that are not only quiet, but free of glass fiber erosion typically associated with standard sound attenuating products.

For your next silencer application, remember, "We make it easy" at SEMCO Duct & Acoustical Products Incorporated.

Features

- Acoustic fiberglass fill
- Excellent attenuation across all octave bands
- Independent test data
- Manufactured to exacting dimensions
- Minimal pressure drop
- Models designed for low frequency octave bands

Materials available

- Aluminum
- Galvanized steel
- Stainless steel
- Powder coated

Sizes available

- 3' to 10' standard lengths
- 12" to 48" standard heights and width combinations
- 12" to 60" standard round sizes
- Custom sizes available

Options and accessories

- AVRON46™ Antimicrobial Coating
- Mylar, Tedlar, Vinyl & Fiberglass cloth wraps
- Acoustic stand-off
- Flanged Connectors

Applications

- Commercial & Industrial HVAC, Custom Air Handling Units, Generator Enclosures, Exhaust Stacks, Manufacturing Equipment
